## IF YOU'RE A SMOKER

OR FORMER SMOKER...

You may benefit from a low-dose CT scan that detects early-stage lung cancer.

The 15-minute exam uses radiation levels significantly less than those of a diagnostic CT. The benefits of detecting and treating lung cancer far outweigh any exam risk.

Most health insurance doesn't yet pay for this screening. If you qualify and are not covered, we will provide the CT scan and physician consultation at our state-of-the-art Radiology Center for \$150

## You qualify for the screening if you are:

- 55 years and older with a smoking history of 30 "pack years" (packs per day x years of smoking).
- 50 years and older with any additional risk factor (family history of lung cancer; exposure to second-hand smoke, asbestos, radon; diagnosed with another cancer).

Research shows that screening, which detects tiny lung spots years before they appear on a regular chest x-ray, reduces death from lung cancer for high-risk patients.
